

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Canceled).
2. (Canceled).
3. (Previously Presented) The device according to Claim 16, wherein the nozzle holder in a region of the washing nozzle has an opening having a diameter that is larger than a diameter of a washing-fluid jet to be generated by the washing nozzle.
4. (Previously Presented) The device according to Claim 16, wherein the nozzle holder has a chamber arranged immediately upstream of the insert, as seen in a direction of flow, and configured to connect a washing-agent supply to the washing nozzle.
5. (Previously Presented) The device according to Claim 16, wherein the nozzle holder is in mushroom form and, on an underside of a head region, has a latching means for connecting the nozzle holder to a bodywork panel.
6. (Previously Presented) The device according to Claim 16, wherein the insert is accessible from outside the nozzle holder and configured for attachment of a turning tool.

7. (Previously Presented) The device according to Claim 16, wherein the cutout is a bore.

8. (Canceled).

9. (Previously Presented) The device according to Claim 7, wherein the bore tapers in a downstream direction in one of a continuous and a step-like manner.

10. (Previously Presented) The device according to Claim 16, wherein the half-cylinders are connected via a film hinge.

11. (Canceled).

12. (Currently Amended) The device according to Claim 10, wherein the cutout is arranged in a region of at least one section plane ~~of a half-cylinder~~.

13. (Currently Amended) The device according to Claim 10, wherein the cutout is arranged in a region of ~~[[a]] the section plane of one of the half-cylinders a half-cylinder~~, and wherein the section plane of the other of the half-cylinders ~~second half-cylinder~~ is designed as a sealing surface.

14. (Canceled).

15. (Canceled).

16. (Previously Presented) A device for cleaning a window or headlamp lens of a motor vehicle, comprising:

a nozzle holder;

a washing nozzle; and

an insert arranged in the nozzle holder and configured to retain the washing nozzle within the nozzle holder, wherein the insert is rotatable with respect to the nozzle holder so that an angle of inclination of the washing nozzle is adjustable with respect to the nozzle holder,

wherein the insert has a cutout configured to generate a washing-fluid jet, and

wherein the insert is divided along a longitudinal axis into two substantial half-cylinders, each half-cylinder having a section plane, wherein the half-cylinders are pivotably connected to one another at a longitudinal edge of their section planes to form a cylinder when lying one upon the other by way of their section planes.

17. (Previously Presented) A device for cleaning a window or headlamp lens of a motor vehicle, comprising:

a nozzle holder; and

an insert arranged in the nozzle holder and configured as a washing nozzle, wherein the insert is rotatable with respect to the nozzle holder so that an angle of inclination of the washing nozzle is adjustable with respect to the nozzle holder,

wherein the insert has a cutout configured to generate a washing-fluid jet, and

wherein the insert is divided along a longitudinal axis into two substantial half-cylinders are pivotably connected to one another at a longitudinal edge of their section planes to form a cylinder when lying one upon the other by way of their section planes.

18. (Previously Presented) The device according to Claim 17, wherein the cutout is a fluidic structure configured to generate an oscillating washing-fluid jet.
